

# Lecture 7.2 Law of Mass Action

Note Title

9/16/2011

Law of Mass Action:

$$\text{rate}_f = \text{rate}_r$$

$$k_f [\text{N}_2]^1 [\text{O}_2]^1 = k_r [\text{NO}]^2$$

$$K_{eq} = \frac{k_f}{k_r} = \frac{[\text{NO}]^2}{[\text{N}_2][\text{O}_2]}$$

equilibrium constant.  $\leftarrow$  products  
 $\leftarrow$  reactants

...  $K_{eq}$  depend on temperature.

... ALL conc are equil concentrations.

$$\begin{aligned}
 [\text{O}_2]_{eq} &= 1.638\text{M} & [\text{N}_2]_{eq} &= 0.638\text{M} \\
 [\text{NO}]_{eq} &= 0.722\text{M}
 \end{aligned}$$

$$\text{L.M.A. } K_{eq} = \frac{[\text{NO}]^2}{[\text{N}_2][\text{O}_2]} = \frac{(0.722)^2}{(0.638)(1.638)} = 0.499 = K_{eq} @ 25^\circ\text{C}$$

$K_{eq}$  unitless
